'Klügste Nacht des Jahres' (Brightest Night of the Year)

Charité also took part in the 'Brightest Night of the Year' of the event. As one of Berlin's largest research facilities, Charité attracted great interest and recorded a large number of visitors.

Long Night of the Sciences

This event, which spans Charité's three clinical campuses, involves research scientists introducing their work at information desks, as well as through presentations and workshops. Guided tours of the research laboratories and/or clinical units that normally remain closed to the public are a particularly popular feature. You are invited to make this event a success!
